# 6:1 WET ON WET FILLER CPG-02.018

## CHARACTERISTICS:

Universal two-component acrylic filler designed to be used in the "wet-on-wet" technique. It is ideal for application on new or slightly damaged elements treated with anti-corrosion filler or cataphoresis (surfaces treated with cataphoresis do not require sanding). It can also be used as a standard filler on elements with small repairs using polyester putties (e.g. transport damages or small dents). This filler has anti-corrosive properties.

**APPLICATION:** The surface being repaired must be clean, dry, matted and degreased.

#### Wet-on-wet version:

Measure out the A+B mixture by volume: 6 parts by volume of filler (A) and 1 part by volume of hardener (B), then mix thoroughly. Add a thinner for acrylic products (C) in an amount of 15 vol. % of component A. At the application temperature up to 25°C, a standard thinner (CDL-07.002) should be used, while above 25°C a slow thinner (CDL-07.015).

Apply with a spray gun (spray nozzle 1.2 - 1.3 mm) in 1 layer. Prior to application of the topcoat, wait 30 min at 20°C (time to evaporate solvents). Small correction (remove inclusions) can be made after 30 - 35 min at 20°C, using P600 - P1000 dry. Further works can be performed without matting the surface up to 3 days.

Filling version:

Measure out the A+B mixture by volume: 6 parts by volume of filler (A) and 1 part by volume of hardener (B), then mix thoroughly. Add a thinner for acrylic products (C) in an amount of 5 - 15 vol. % of component A. At the application temperature to 25°C, use a standard thinner (CDL-07.002), while above 25°C a slow thinner (CDL-07.015).

Apply with a spray gun (spray nozzle 1.3 - 1.6 mm) in 2 layers, with a 5 - 7 minute interval to evaporate solvents. It can be sand with abrasive materials: P400 - P600 dry or P800 - P1000 wet.

#### TECHNICAL DATA:

## NOTES:

Allow the product to reach the recommended application temperature in a natural, unforced way (avoid rapid heating/cooling). Temperature of the product and the object being painted and ambient temperature should be approx. 20°C.

## **STORAGE AND TRANSPORT:**

Protect from frost, heat, sunlight and moisture. Store tightly closed in a dry and cool place. Recommended storage temperature: +10 to +30°C.
